

In Newly Diagnosed Type 2 Diabetics

For Round the Clock

Accurate Glycemic Control....

Vilda-M

Vildagliptin 50mg+ Metformin 500mg **Tablets**

Vildagliptin + Metformin

Vilda-M

The Globally Acclaimed Antidiabetic for Accurate Glycemic Control

- Vildagliptin reduces Blood Pressure and increases Heart Rate, whereas Metformin increases Heart Rate without affecting Blood Pressure during intraduodenal glucose infusion in type 2 diabetes. These distinct cardiovascular profiles during enteral nutrient exposure may have implications or postprandial hypotension.
- Vildagliptin showed long-term benefit for type 2 diabetes by preserving β -cell function and normalizing the lipid profile.
- Vildagliptin can prevent defensive eating by decreasing the risk of hypoglycemia
- Clinical trials have demonstrated that vildagliptin has a neutral effect on weight, which is partly explained by its low risk for hypoglycemia.
- Vildagliptin with metformin fixed-dose combination tablets are taken twice daily with meals.
